

1. Install dependencies
 - a. Npm install react react-dom //this is get React and React-dom installed
 - b. Npm install bootstrap //this is to get bootstrap installed
 - c. npm install -D @vitejs/plugin-react //this allows React to work with Vite in the dev environment
2. Add this into vite.config.js
 - a. Add this to the top
 - i. Import react from '@vitejs/plugin-react';
 - b. Add this in the return statement
 - i.

```
Plugins: [react()],  
Resolve: {  
  },
```
 - ii. Plugins tells Vite to use the React plugin
 - iii. Resolve is an optional config for module resolution (ex: custom alias paths)
